Location: Benevento - Italy
Photographer: Cannata&Partners
Type of work: External Lighting
Lighting Design: Filippo Cannata
Lighting Design team: C.Masone
Completed: 2005

The project was carried out with a technical approach and procedure designed to the correct placement of the building within the city without failing to ensure the proper respect due to a construction of such high historical value. We highlighted the emerging elements of the facade as the brackets veil that crowns the central block projecting over the side wings, and the noble balcony above the entrance door. We did not fail to enhance also the lancet windows, the double-and triple-windows with the spiral columns that represent the hallmark of the structure. Minimal levels of brightness light the building as it was covered by a slight veil, soft and gentle touches of light emphasize the shapes enhancing the beauty and charm. The unobtrusive fixtures were hidden from view by the arrangement on the stone window sills with special glues which are not corrosive or harmful for the surfaces. A management system ensures pleasant and scenic effects through the production of different scenes for different events.
