Lighting Design team: C.Masone
Completed: 2006

Outside: chaos, traffic and noise. Inside: history, pleasant strains and light. After the half-light of the entrance, the full light of the court. You go out for a moment and you enjoy the transformation of the city in a place made of swift rhythms and lively sounds, then inside again, in the big room which is a sort of ship upside down where light and shadow generate a magic, absolutely poetic space. The palace is the symbol of the local culture, the maintenance and the exaltation of the relation with his own history. Lighting is realized with unobtrusive sources able to respect the architecture and the place in which they are placed. This is the main theme of our intervention: light, with all her shades is the mean by past and present interact and merge.
